

# NEWS

Dear customer !

Following the feedback we receive on a regular base from our dealer network and our focus to continuously improve our products we can present you another small but effective step to improve the „user-friendliness“ of the FR 125 MAX engine family ( MAX / JUNIOR MAX / MINI MAX)

From at latest January 2005 onwards we will offer a new jet needle „K 98“ (ROTAX part number 261191 ) .

This needle offers diverse advantages such as :

- **Better throttle response out of the corner (no more missing ignitions / 4 stroking)**
- **More stable idling behaviour**
- **Less fuel consumption**

With regards to the question of performance. This change does not improve the performance of the engine, however the drivability and ease of use will be improved, which may result in better laptimes, especially for the inexperienced driver.

You can still use the new needle with the needle position as you had with the „K27“ needle. New needle will fit on all „older „ MAX engines.

The needle will be available at your closest distributor, dealer or Service center at reasonable price ( no increase over standard needle price) end of January 2005 onwards.

All engines supplied from 2005 onwards will already come with the new needle as standard.

This needle is of course legal in MOJO ROTAX MAX Challenges events from 2005 onwards !
